

ZERO EMISSION

NO NOISE

ZENN

Earth's Favorite Car!

**ZENN is a car that, while it runs on electricity,  
is fueled by optimism.**

**The belief that individuals can make a difference.  
That we can do better.**

**ZENN is a car you can feel good about.**

**Since we first began to walk,  
we have loved the feeling of movement.**

**To get around and see the world.**

**To be free.**

The earth-friendly future is here with ZENN, the Zero-Emission, No-Noise fully-featured electric vehicle. In addition to requiring no gasoline, the ZENN distinguishes itself with comfort, convenience and value no other Neighborhood Electric Vehicle (NEV) can match.

**Cars have given us mobility,  
but with the heavy costs of  
pollution and oil dependency.**

**Driving a ZENN can eliminate  
up to 6 tons of CO<sub>2</sub> emissions  
every year.**

**What do you get when you take away the noise and pollution?**

**A car that everyone loves to drive.**

At a fraction of the cost, a ZENN can easily meet the transportation needs of many urban-dwellers. Whether this is the first, second or third car in your driveway, using a ZENN for your short haul trips makes great economic and environmental sense.

## Are you in the zone?

Neighborhood electric vehicle users replace up to 90% of city-core trips previously made with a conventional car.

## **The ZENN advantage**

**Of course, emissions are just a part of the story. A ZENN also makes compelling economic sense. First, there's a low initial ownership investment. Second, to drive a conventional vehicle with an internal combustion engine costs up to ten times more than driving a ZENN.**

**According to a recent study conducted by the Green Car Institute, Low Speed Vehicle (LSV) users replaced up to 90% of city-core driving previously made with a conventional car.**

**At only pennies per mile to operate, and with minimal maintenance requirements, the ZENN is the ideal choice for consumers and businesses alike.**

**The ZENN can be recharged anywhere by simply plugging it into a standard electrical outlet and it can be ready to go in as little as 4 hours!**

## How FAR? 30 - 50 miles

## How FAST? 25 mph

Limited in accordance with FMVSS 500 regulations and designed to meet neighborhood and urban transportation needs. Its intended use is busy urban areas, lower speed roads and places like gated communities and campuses where high speeds are neither desirable nor safe.

### Specifications

**Charging:** Standard 110 volt outlet plug-in, complete charge in approximately 8 hours from empty.

### Available Colors

**Silver**

**Green**

**Blue**

**Body Type:** 3 door hatchback, fully enclosed, automotive aluminum alloy space frame, ABS body panels

**Brakes:** Dual hydraulic system, 4 wheel disc with electromagnetic regeneration

**Batteries:** Six 12-volt heavy-duty, sealed, valve regulated lead acid, no spill, zero maintenance

**Propulsion:** 100% electric, front wheel drive

**Storage:** 13 cu. ft.

ZERO EMISSION  NO NOISE
